SUMMARY

Computer Science student at Portland State University with a track record of shipping end-to-end products from concept to production. Recently deployed **AI GlobeScout** — an AI-powered Chrome extension with a serverless backend on Netlify, including automated CI/CD from GitHub, LLM-driven content extraction, and 3D geospatial rendering. Interested in software engineering internships and full-time roles at the intersection of applications and infrastructure.

EDUCATION

Portland State University

Bachelor of Science in Computer Science

Portland, OR

Expected Graduation: June 2027

Relevant Coursework: Data Structures, Algorithms, Object-Oriented Programming, Programming Methodologies & Software Implementation

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C++, Python, SQL, HTML, CSS, Bash

Cloud & DevOps: AWS, Netlify Functions (serverless), CI/CD via Netlify + GitHub, REST APIs

Frameworks & Libraries: React 19, Vite, Node.js, Tailwind CSS, CesiumJS, Chrome Extensions API (Manifest V3)

AI: Anthropic Claude API, Google Gemini, LLM prompt engineering, AI-assisted development (Claude, Copilot)

Developer Tools: Git, GitHub, VS Code, Chrome DevTools, Xcode, npm, Make

Concepts: OOP, Rule of Three, responsive design, rate limiting

PROJECTS

AI GlobeScout — AI-Powered Chrome Extension | *React 19, Vite, CesiumJS, Netlify Functions, Anthropic Claude*

GitHub

- Built and deployed a Manifest V3 Chrome extension that uses Claude to extract travel destinations from any webpage and visualize them on a topographic 3D globe with streamed World Terrain elevation data
- Architected an MV3-compatible Cesium integration by sandboxing WebGL rendering in an isolated iframe and bridging it to the privileged extension context via `postMessage`, circumventing Chrome's ban on `unsafe-eval`
- Deployed a serverless backend on Netlify Functions proxying Anthropic Claude and Cesium ion, keeping API keys server-side; configured automated CI/CD from GitHub with per-IP rate limiting on all endpoints
- Authored a custom React hook wrapping `chrome.storage.sync` with real-time cross-device sync via the `onChanged` event listener; designed a two-surface UI sharing state seamlessly

Personal Portfolio Website | *React, Tailwind CSS, Vite, Netlify*

payalmistry.com

- Designed and developed a responsive single-page portfolio from scratch using React 19 with Vite, showcasing projects, skills, and professional experience to technical recruiters
- Engineered a custom design system in Tailwind CSS v4 with 12+ theme-level CSS variables for colors, typography, and spacing, ensuring cohesive visual identity across components
- Implemented advanced CSS animations including conic-gradient laser borders, glassmorphism effects, and staggered fade-in transitions using the `@property` API

Auto Calendar Chrome Extension | *JavaScript, HTML/CSS, Chrome APIs*

GitHub | DevPost

Norse Hacks Hackathon — Team Project

- Built a Chrome extension parsing selected webpage text into structured calendar events with ICS export for Google Calendar, Apple Calendar, and Outlook
- Integrated Chrome APIs (tabs, scripting, runtime messaging, downloads) for real-time data extraction and dynamic event creation
- Collaborated in a 3-person team using Git branching strategies, delivering a functional MVP under a 24-hour time constraint

Escape Room Manager | *C++, OOP, Data Structures* | CS 302

GitHub

- Designed a single inheritance hierarchy with abstract base class and three derived classes; implemented circular and linear linked lists using exclusively recursive algorithms
- Managed dynamic memory with Rule of Three (destructors, copy constructors, assignment operators); compiled warning-free with `-Wall` flag

CERTIFICATIONS

- AWS Certified Cloud Practitioner** — Amazon Web Services | *In Progress* — *Expected November 2026*
- Google AI Professional Certificate** — Google via Coursera | May 2026 | Verify
- Google AI Essentials** — Google via Coursera | May 2026 | Verify

ACTIVITIES

- Norse Hacks Hackathon Participant** — Collaborated with a multidisciplinary team to design, build, and submit a working software product under 24-hour constraints
